

Moisture in Motion

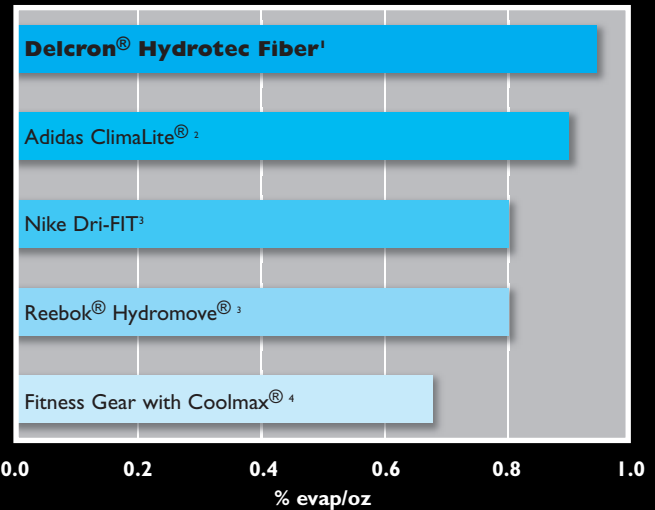

Delcronic Hydrotec fiber is an engineered permanent hydrophilic synthetic performance fiber. This fiber is designed to provide bonding sites for attracting water molecules. Thus the fiber absorbs moisture from the skin and transports it to the fabric surface where it evaporates at a faster rate than any other competitive performance fiber.

Absorbency (Capacity)

Evaporation Rate

Test completed in 2003 by T-PACC in the College of Textiles at NC State University. Testing completed after 25 washes by GATS Absorption and Drying Test.
