

# Moisture in Motion

Delcron®  
**HYDRO**  **TEC**  
*fiber*

Keep moisture on the move and away from the skin with Delcron® Hydrotec fiber from DAK Americas. This proprietary fiber is engineered to provide superior moisture management capabilities while retaining a soft hand making it a perfect match for performance hosiery. What's more, Delcron® Hydrotec fiber is a spun staple fiber. Products made with this fiber will not lose their wicking ability after repeated washings like topically finished products because the moisture management is permanently built-in to the fiber itself.

Recent independent testing confirmed that Delcron® Hydrotec fiber has the highest absorbency capacity and highest evaporation rate among competitive products. Delcron® Hydrotec fiber beat out top industry names during GATS Absorption and Drying tests.

With Delcron® Hydrotec fiber you get higher absorbency and higher evaporation resulting in overall better moisture management. What you don't get is a higher price. What are you waiting for? Give your hosiery a competitive advantage...the ability to put moisture in motion!

Call DAK Americas™ at 1-877-432-2766 today to learn more about the exciting possibilities.
